

Learning Technology Company of the Year

The Learning Innovations Company

UniServity is one of the world's leading providers of pioneering learning techniques and media technology. It supports over 3,000 customers within 90 local authorities across 22 different countries worldwide. It provides combined learning facilities from the USA and United Kingdom to Australia and Hong Kong.

Its rapidly growing reputation is built on delivering major school improvements and it is increasingly becoming the partner-of-choice for forward thinking educational communities looking to connect with future generation learners. UniServity delivers an astounding 4.5 million learning resources, which include 23,000 collaborative learning wikis, upwards of 45,000 assigned learning tasks and in excess of 65,000 forum educational conversations. UniServity currently has over 5 million weekly page visits and an amazing 750,000 unique logins, which are always on the rise, and this is what makes UniServity a major contender for the largest global education community in the world.

On top of providing learning technologies and

online learning. It is supported by a specifically qualified and experienced team of learning and educational technologists, who are ready to provide personalised guidance and support.

It takes massive pride in its approach of 'Every learner and every school is unique' and this is why it is willing to support each and every learner to:

- Discover the opportunities available to you through learning technologies, which can support and enhance your school.
- Identify priorities based on school progress plans, targets and aspirations.
- Map how you can obtain your priorities and, more importantly, how to ensure that your time and energy isn't wasted and becomes sustainable.

This support includes a framework and consultancy model called "The Life Plan" which, in essence, supports school leadership teams in the efficient implementation of a learning cloud. One of the key features to this model is "The Evolution Framework", which maps school progress issues onto the cloud. All UniServity's support and tools have been developed by closely working with school teachers during more than 5,000 on-site support visits.

managed services, UniServity has also created and developed an extremely successful and efficient implementation model for schools. It considers successful online learning to be about more than simple technology.

This model is hugely respected and has been handed an award for adopting, developing and innovating

The Life Cloud, created by UniServity, is a combination of new technology and a top-notch learning cloud, that it says will 'lift learning safely into the clouds'. The Life learning cloud gives customers an easy-to-use, safe and ground-breaking online learning space that is also friendly and flexible to users of any age or educational level. It allows every user to achieve their goals, whether at school or in the comfort of their own home.

UniServity CEO, Matt Clarke, says, "Life is a fantastic learning cloud that we have been working on for several years. Our aim is to help children of several ages achieve their goals and ambitions and we feel our revolutionary cloud is the future of online learning."

This new programme integrates popular social media networks including Facebook, Twitter and MySpace, just to name a few. It has the capability to place learners into safe and secure communities with access to a series of recognisable social networking tools, allowing them to create and maintain meaningful, relevant and authentic learning relationships with other learners with a range of diverse skills, opinions and backgrounds. This then enables the learner to take part in conversations and debates to share and assess each other's work and knowledge.

The ability to be part of multiple communities gives learners the choice to break free of the traditional classroom and gives teachers the freedom to encourage learning opportunities beyond the realms and constraints of a scheduled school day. Matt Clarke says, "Having the ability to take part in extra learning activities outside of school is a massive advantage. It enables the learners to progress by taking others' knowledge to achieve your own goal. Another advantage is that parents and other family members have the ability to see what their child is doing at school and keep up-to-date with their progress."

There are five things that make Life unique. The Cloud (previously discussed above), Foundation, Learning Exchange, Learning Analytics and Learning Innovations.

- The Life Foundation is a global society of over three million learners and teachers. Here you will gain access to UniServity's proven change management approach as well as sharing experiences, interacting and learning from the ever-growing

- community.
- The Life Learning Exchange provides a quick and easy way to share and acquire the 25+ million resources, projects and learning spaces.

- Life Learning Analytics will provide intelligent reporting and analysis, so data becomes significant and focuses on the impact of learning. The Life semantic learning engine looks at what you are doing and helps discover what you don't know, bringing you the most appropriate tools, resources and content.
- Life Learning Innovations is driven by its Life Teacher Design Group, it puts the future of life into the hands of the Life Community. The LifeLabs team brings strategic and inventive technologies to Life including handheld device apps. These are complemented by its suite of APIs so that technology partners and school enthusiasts can create their own learning cells and apps for life!
